**Comments & Conclusions:** Yellow line = sample origin @ 10mm, red line = solvent front @ 70mm. Lane 6 is the test sample Horny goat weed (90). Lanes 1, 2, 3, 7, 8 are the reference samples used for comparison. This test sample, Horny goat weed (90), is consistent with the chromatographic profile of the reference samples of Epimedium sp., used above. **This test sample, Horny goat weed (90) is characteristic of an extract derived from Epimedium sp. herb (leaf, flower, stem).**

*NOTE: The above conclusion may be a function of the natural variance found in botanicals &/or the extraction process used to create specific extracts. The growing and drying conditions, age, seasonal variations, geographic location, extraction solvents, etc. all play a role in the phytochemical fingerprint of botanicals as well as their extracts; hence, chromatographic variations are expected.*
